

Follow the guidelines and stay healthy!

Dear employees,

We are following with concern the increase in morbidity data in Israel in recent weeks due to the Corona epidemic. As of July 9, 2020, there are 16,025 active patients in Israel, 122 patients in critical condition, 39 are intubated, and 348 in the aggregated died from the outbreak of the epidemic.

Following the significant increase in the number of patients and the rate of infection, we would like to contact you once again and refine the guidelines. The last few months and the spread of the virus have disrupted the routine of us all, and we appreciate your dedicated work with the patients in nursing care, who are in need of increased protection against the Corona virus, and the efforts you are taking in this challenging and complex period.

We all hope things will change for the better and soon you will be back to a healthy routine: meeting friends, traveling, vacationing in your country, meeting your dear family, your parents and children who stayed home, the family for whom you traveled to work in Israel.

We would like to remind you that it is mandatory to observe the established rules: **hygiene, wearing a mask and social distancing - two meters from person to person.** Failure to follow the rules is one of the main causes of the increase in morbidity. If you feel Corona symptoms, such as fever and respiratory symptoms, get tested right away! We all have a duty to obey the guidelines and follow them for the health of us all.

Please note: In order to stop the spread of the Corona virus in Israel, enforcement has been increased in public gatherings and in the public sphere across the country. Violations of the guidelines are handled by the Israel Police by giving fines.

The updated fine for not wearing a mask in the public domain - 500 nis; for being present in a forbidden area - 500 nis.

We believe that you adhere to the required rules and act in accordance with the guidelines of the Ministry of Health. Failure to follow the rules Follow the rules and take care of yourselves!

may result in new patients and the transmission of the virus to patients who are dear to you, your family and friends.
